

Open Frame Models

The SpinoFLEX Adaptable Body Weight Support System offers the most effective support mechanism available today.

- Open frame models allow unobstructed movement over treadmills, wheelchairs, stretchers, beds and other equipment
- Unique dual column power-drive mechanism gives stable and strong support
- Simultaneous movement of both the armrest platform and harness gives most comfortable lifting experience
- Removable armrest platform with grips offers stable and comfortable upper body support
- Offset lifting provides better patient access
- Light weight and strong frame supports up to 400 lbs weight
- Standard power lifting offers 250 lbs of lifting capacity and optional lifting upgrade offers 400 lbs of lifting capacity
- Both standard and custom models are available to meet customer requirements
- Precision bearing lockable casters and light weight aluminum frame for effortless movement
- Increased vertical movement range offers full support from children to tall adults

- Flexible use of either the platform, harness or both as needed
- Convenient hand-held controller provides single knob operation to control both direction and speed of adjustments
- Shaft driven lifting mechanism offers maintenance-free and durable performance
- Allows for easy movement through doorways and areas with lower ceilings
- Facilitates gait training over ground or treadmills
- With optional battery backup unit, these models can be moved freely

Standard Units Specifications
